A: I'm not sure what you mean by "No columns" but a vertical line can be drawn using just a single scanline (or line) of data. The terminal just needs to know where to draw the line and a couple of bits for the thickness (for a solid line) or a few bytes for a dashed line (or 2). From the terminal perspective there is no distinction between lines and characters, so the terminal should handle them both in the same way. If your terminal does not display lines the same width as characters then it is failing to handle the inter-character spacing properly. But I'll be nice and assume your terminal is going to correctly deal with all of that: #include int main() { int row; for (row = 0; row 1.
